YoBot® Bot Package Overviews

Starter Bot

Core AI Chatbot with SMS/email flows, basic CRM logging, and simple integration capabilities. Ideal for lean teams who want to start automating lead capture.

Pro Bot

All Starter features + VoiceBot functionality, integrated calendar tools, and smart follow-up automations. Perfect for teams ready to scale with voice and scheduling built in.

Enterprise Bot

Everything in Pro, plus advanced lead scoring, quoting tools, performance dashboards, and multi-platform CRM + app syncing. Built for operational efficiency at scale.

Platinum Bot

Includes every module and integration, with full white-labeling, custom analytics, unlimited workflows, and priority support. Ideal for white-label partners and national-scale automation.

YoBot® Performance Module Overview

SmartSpend™ Dashboard

Monitor your marketing costs, lead expenses, and operational budget in one place. This dashboard tracks where your money is going and calculates real-time ROI by pulling spend data from Airtable, CRM tools, or your internal tracking systems.

YoBot® Command Center Dashboard

The centralized control panel for your bot system. Includes voice input/output settings, conversation logs, real-time sentiment analysis, CRM sync status, analytics reports, and calendar integration — all in one clean, interactive interface.

Botalytics™ ROI System

Automatically calculates the value YoBot® is delivering. Tracks conversion rates, lead volume, labor hours saved, and revenue increases — comparing before-and-after performance to show real return on investment every month.

“Note: For larger or customized integration projects, additional setup fees may apply. Please contact us for a custom quote tailored to your specific requirements.”

ChatGPT Booster

Gives your bot advanced natural language abilities using OpenAI's API. Enables better memory, reasoning, tone control, and context awareness — especially useful for industry-specific or complex customer interactions.

Slack Notifications

Sends instant alerts to your team in Slack when high-quality leads come in, when meetings are booked, or when specific phrases are triggered. Keeps your sales team in the loop without needing to log in anywhere else.

A/B Script Testing Engine

Allows you to test multiple chatbot scripts at once to see which version performs best. Tracks performance metrics like engagement rate, booking rate, and conversion — then shows clear winners so you can optimize over time.

Live Transfer Routing

Enables the bot to detect when a user is ready to talk and automatically transfer them to a human rep by phone, SMS, or Slack. You control routing logic and escalation triggers inside the Command Center.

Smart Quoting Engine

Creates and sends branded, professional quotes to prospects directly through chat or SMS — automatically filled in with the product or service they requested. Includes support for PDF generation and CRM logging.

Custom Personality Pack

Choose a branded tone and voice style for your bot — from corporate and formal to fun and casual. Adjusts wording, emojis, and behavior to match your company's image or audience expectations

QuickBooks Online Sync

Connects your Airtable system and YoBot® to QuickBooks Online, allowing for automated syncing of invoices, payment statuses, and customer data — no manual entry needed. Supports full two-way data updates.

Booking Tool Setup

“Note: For larger or customized integration projects, additional setup fees may apply. Please contact us for a custom quote tailored to your specific requirements.”

Fully integrates your calendar tool (Calendly, TidyCal, or Google Calendar) with your chatbot. Lets users book meetings directly inside the chat window, with instant confirmation and CRM follow-up automation.

White Label Mode

Rebrands your entire bot experience under your company's name. Removes all YoBot® logos, links, and references. Allows you to resell or present YoBot® as your own proprietary platform with a white-label license.

Lead Generation & Scraping Tools

Automatically pulls business leads from online directories, Google Maps, LinkedIn, or other target websites. Uses custom filters to capture emails, names, and business info — delivered into your CRM or Airtable.

Advanced Data Integration Hub

Lets your bot connect with third-party systems like ERPs, SQL databases, HR platforms, or APIs. Enables two-way syncing between the bot and backend systems without requiring developers or code.

Automated Content Gen Studio

AI-powered content creation for sales replies, emails, blog drafts, and chatbot responses. Automatically drafts content based on user queries, your brand voice, and current campaign goals.

Predictive Analytics Engine

Uses machine learning to forecast which leads are most likely to convert. Analyzes user behavior, past deals, and interaction patterns to highlight high-value opportunities and recommend next actions.

Conversational Intelligence Suite

Analyzes every conversation to identify improvement areas. Tracks question types, objections, drop-offs, and closing language — turning chat logs into insights that can optimize your scripts and rep coaching.

Customer Journey Orchestration

Connects all stages of the customer lifecycle — from lead capture to follow-up to retention. Automates transitions between SMS, email, CRM updates, task creation, and sales handoffs.

Competitive Intelligence Radar

“Note: For larger or customized integration projects, additional setup fees may apply. Please contact us for a custom quote tailored to your specific requirements.”

Monitors your top competitors across Google, ad platforms, websites, and listings. Flags pricing changes, keyword shifts, and new campaigns — so you can respond quickly and adjust your messaging.

Voice Pattern Recognition & Analysis

Call Sentiment Log

Analyzes tone, pacing, urgency, and hesitation during voice interactions. Uses AI to detect emotional cues, frustration, or buying signals to improve both your bot scripts and human follow-up.

Other (Custom Request)

If you need something totally custom — like a 3rd-party integration, custom quote system, industry-specific flow, or anything else — we'll scope it and build it. Custom features are quoted separately.

“Note: For larger or customized integration projects, additional setup fees may apply. Please contact us for a custom quote tailored to your specific requirements.”
